Subject: Hydraulic System - Low Oil/ High Temperature Shutdown.

Unit/Part Affected: All Cubex ITH / DTH drills

An automatic shutdown system is available for the hydraulics on Cubex underground drills. The system will turn off the drill if either the hydraulic oil level is low or the hydraulic oil temperature is too high. This is done by placing a sensor in the hydraulic tank. As well, two warning lights are installed in the main control panel to indicate if these conditions are present.

Low Hydraulic
Oil Warning
Light

High Hydraulic Oil
Temperature
Warning Light

This system can be ordered as an option on new drills or purchased as a retrofit kit for existing drills as CM19055-968.
