Subject: Stinger Cylinder Extensions.

Unit/Part Affected: Screw on type extensions for stingers cylinders.

Purpose: To notify Cubex customers using the older style “Screw on” style, stinger cylinder extensions about a potential hazard. If the stinger cylinder extensions are not installed properly, they could vibrate loose and fall off causing serious injury.

Recommendations:

1. When installing the extensions, the threads should be cleaned thoroughly and Blue Loctite applied. The extensions should then be tightened with a pipe wrench.
2. We recommend the use of the newer style “Pinned” extensions, which are designed to be safer and easier to use.
